A **machine** is a tool consisting of one or more parts that is constructed to achieve a particular goal. Machines are powered devices, usually mechanically, chemically, thermally or electrically powered, and are frequently motorized. Historically, a device required moving parts to classify as a machine; however, the advent of electronics technology has led to the development of devices without moving parts that are considered machines. The word "machine" is derived from the Latin word *machina,* which in turn derives from the Doric Greek $\mu\alpha\chi\alpha\nu\acute{\alpha}$ (machana), Ionic Greek $\mu\eta\chi\alpha\nu\acute{\eta}$ (mechane) "contrivance, machine, engine" and that from $\mu\hat{\eta}\chi o\varsigma$ (mechos), "means, expedient, remedy". This work explores the making of machines musically, using their sounds to create feeling, ambience and rhythm. A series of electronic parts to flow and move like a created, imagined machine.
